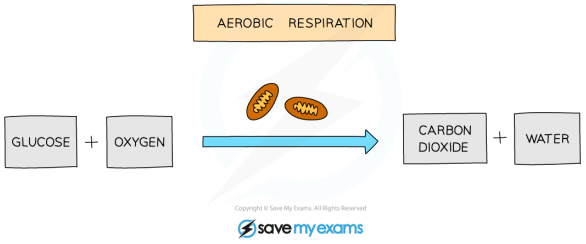
Help me understand

Respiration is a Chemical Reaction

- **Aerobic** respiration requires **oxygen** and is defined as **the chemical reactions in cells that use oxygen to break down nutrient molecules to release energy**
- It is the **complete breakdown of glucose** to release a **relatively large amount of energy** for use in cell processes
- It **produces carbon dioxide and water** as well as releasing useful cellular energy

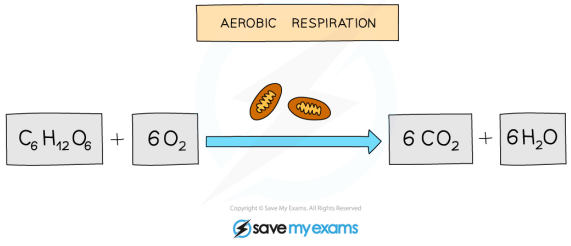


Word equation for aerobic respiration

Stuck on something?
Ask questions and get help with exactly what you're revising.
Got it

equation, only the other way around, so if you know one, you know the other one too!

Balanced Chemical Equation for Aerobic Respiration: Extended



Balanced equation for aerobic respiration

Examiner Tips and Tricks

There are usually **3 marks given for the aerobic respiration chemical equation** in an exam:

- one for getting the correct **formula for glucose and oxygen**
- one for getting the correct **formula for carbon dioxide and water**
- one for **balancing the equation** correctly

So make sure you can do all three to gain maximum marks!
