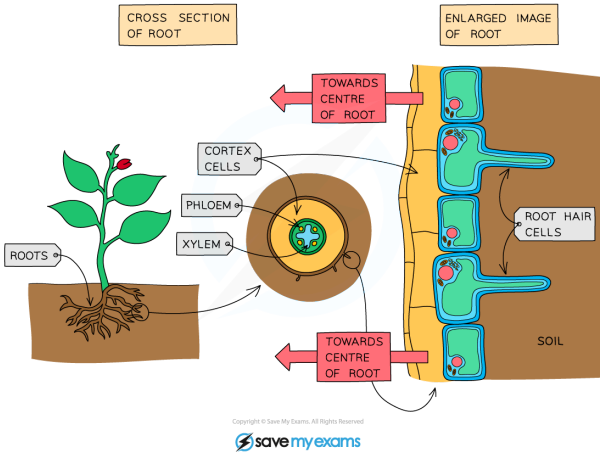
Help me understand

Root Hair Cells

- Root hairs are single-celled extensions of **epidermis cells** in the root
- They grow between soil particles and absorb water and minerals from the soil
- Water enters the root hair cells by **osmosis**
- This happens because soil water has a **higher water potential than the cytoplasm** of the root hair cell



Structure of the root

Stuck on something?
Ask questions and get help with exactly what you're revising.
Got it

of the absorption of water by osmosis and mineral ions by active transport
