Photosynthesis

- Photosynthesis is an endothermic reaction
  - Energy is taken in from the environment by chloroplasts / chlorophyll
- The reactants for photosynthesis are carbon dioxide and water
- They are converted into glucose and oxygen
- Chlorophyll (found in chloroplasts) and energy from light are required for this reaction to occur
- The **word equation for photosynthesis** is:

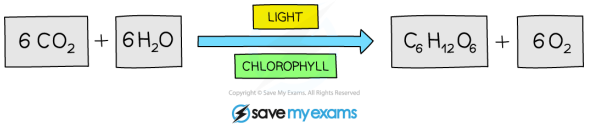
Carbon dioxide and water producing glucose and oxygen during photosynthesis

Help me understand

Symbol equation for photosynthesis

Extended tier only

- The balanced symbol equation for photosynthesis is:



Balanced symbol equation for photosynthesis
