Photosynthesis

Help me understand

- Green plants make the carbohydrate **glucose** from the raw materials **carbon dioxide** and **water**
- At the same time **oxygen** is made and released as a waste product
- The reaction requires **energy** which is obtained by the pigment **chlorophyll** trapping light from the Sun
- So photosynthesis can be defined as **the process by which plants manufacture carbohydrates from raw materials using energy from light**

Examiner Tips and Tricks

If asked for the raw materials required for photosynthesis, the answer is **carbon dioxide and water.**

Although required for the reaction to take place, light energy is not a substance and therefore cannot be a raw material.
