Use & Storage of Carbohydrates

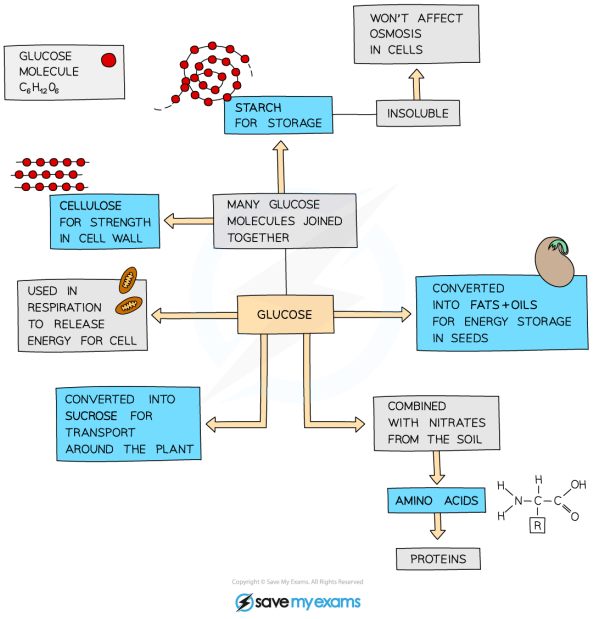
How are the products of photosynthesis used?

- The carbohydrates produced by plants during photosynthesis can be used in the following ways:
  - Converted into **starch** molecules which act as an effective **energy store**
  - Converted into **cellulose** to build **cell walls**
  - Glucose can be used in **respiration** to provide energy
  - Converted to sucrose for **transport** in the phloem
  - As **nectar** to attract insects for pollination
- Plants can also convert the carbohydrates they make into **lipids** for an energy source in seeds and into **amino acids** (used to make proteins) when combined with nitrogen and other mineral ions absorbed by roots



The fate of glucose
