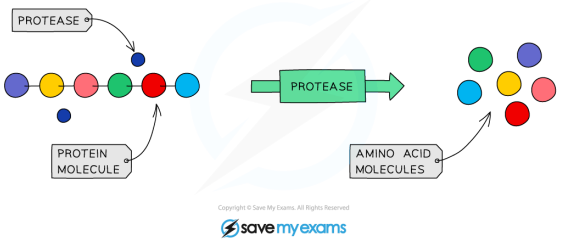
Digestion of Protein: Extended

Extended Tier Only

- Proteases are a group of **enzymes that break down proteins into amino acids** in the stomach and small intestine (with the enzymes in the small intestine having been produced in the pancreas)



The digestion of proteins

- Protein digestion takes place in the stomach and duodenum with two main enzymes produced:
  - **Pepsin** is produced in the **stomach and breaks down protein in acidic conditions**
  - **Trypsin** is produced in the **pancreas** and secreted into the **duodenum** where is breaks down protein in
