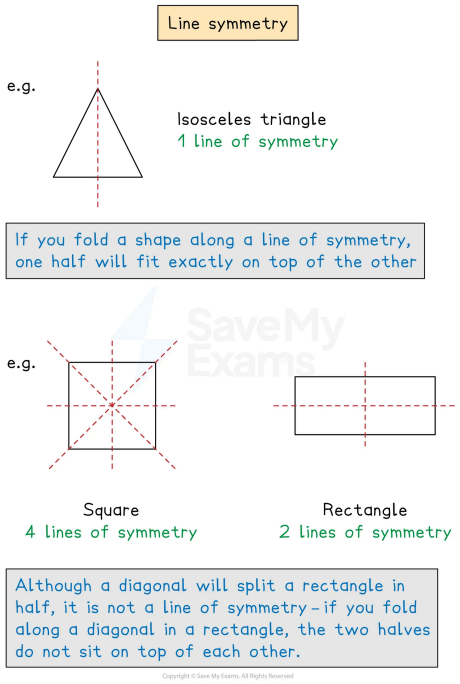
Lines of symmetry

What is line symmetry?

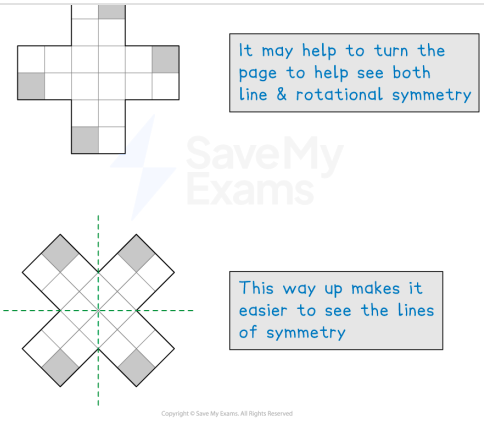
- **Line symmetry** refers to shapes that can have **mirror** lines added to them
  - Each side of the line of symmetry is a **reflection** of the other side
- Lines of symmetry can be thought of as a **folding** line too
  - **Folding** a shape along a line of symmetry results in the two parts sitting **exactly** on top of each other



- It can help to look at shapes from different angles; turn the page to do this

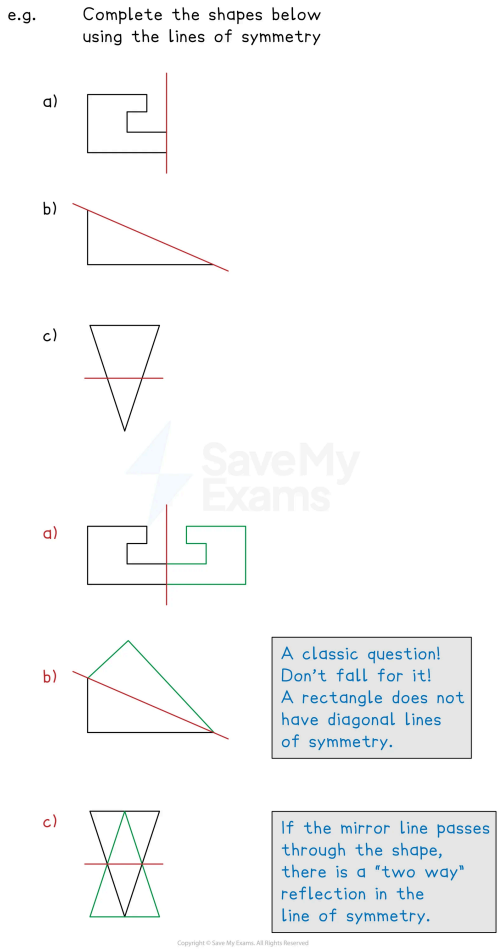
Help me understand

Stuck on something?
Ask questions and get help with exactly what you're revising.
Got it



- Some questions will provide a portion of a shape and a line of symmetry, and you need to fill in the remaining half of the shape
- Be careful with **diagonal** lines of symmetry
  - Use tracing paper to trace the shape and then flip along the line of symmetry

- "**Two-way**" **reflections** (like part c below) occur if the line of symmetry passes **through** the shape

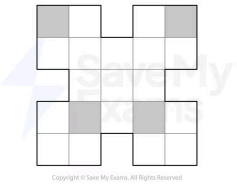


given in a question.

You should be provided with tracing paper in the exam, use this to help you.

Worked Example

Consider the shape below.



(a) Write down the number of lines of symmetry.

Answer:

The only line of symmetry is shown below

There is 1 line of symmetry.

(b) Shade exactly 4 more squares so that the shape has 4 lines of symmetry.

Answer:

The shape below has a horizontal, a vertical, and 2 diagonal lines of symmetry
