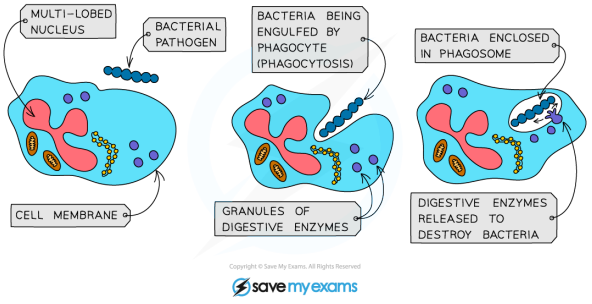
Lymphocytes & Phagocytes: Extended

Extended Tier Only

- White blood cells are part of the body's **immune system**, defending against infection by pathogenic microorganisms
- There are two main types, **phagocytes and lymphocytes**

Phagocytes

- Carry out **phagocytosis** by **engulfing and digesting pathogens**



Phagocytosis

Stuck on something?
Ask questions and get help with exactly what you're revising.
Got it

it and **release digestive enzymes** to digest it
- They can be easily recognised under the microscope by their **multi-lobed nucleus** and their **granular cytoplasm**

Lymphocytes

- Produce **antibodies** to destroy pathogenic cells and **antitoxins** to neutralise toxins released by pathogens
- They can easily be recognised under the microscope by their **large round nucleus** which takes up nearly the whole cell and their **clear, non-granular cytoplasm**
