Fractions of amounts

How do I find a fraction of an amount?

- **Method 1**
  Divide by the **denominator** and **multiply** by the **numerator**
  - To find $\frac{1}{3}$ of 90, divide it by 3
    - $90 \div 3 = 30$
  - To find $\frac{2}{5}$ of 60, divide it by 5 then multiply it by 2
    - $60 \div 5 = 12$, then $12 \times 2 = 24$
- **Method 2**
  Change the fraction into a **decimal**, then **multiply**
  - To find $\frac{1}{4}$ of 16, turn $\frac{1}{4}$ into 0.25 then multiply
    - $0.25 \times 16 = 4$
  - To find $\frac{9}{10}$ of 15, turn $\frac{9}{10}$ into 0.9 then multiply
    - $0.9 \times 15 = 13.5$
- **Method 3**
  Write both numbers as fractions and **multiply two fractions** together
  - To find $\frac{2}{3}$ of 60, write 60 as $\frac{60}{1}$
    - work out $\frac{2}{3} \times \frac{60}{1} = \frac{120}{3} = 40$
  - To find $\frac{5}{6}$ of $\frac{8}{3}$
    - work out $\frac{5}{6} \times \frac{8}{3} = \frac{40}{18} = \frac{20}{9}$
