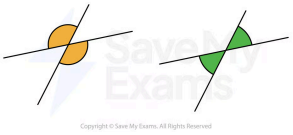
Basic angle properties

What are the basic angle properties?

- Angles around a **point** add up to **360°**
- Angles that form a **straight line** add up to **180°**
- **Vertically opposite** angles are **equal**
  - Vertically opposite angles occur when **two lines intersect**, as in the diagram below



Vertically opposite angles

Help me understand

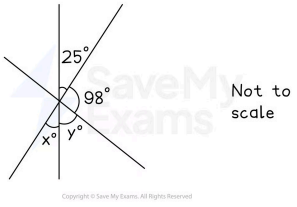
Examiner Tips and Tricks

Use the angle properties to find any missing angles that you can, and mark them on the diagram

- Even if they are not the angle you are trying to find, they may help provide a clue!

Worked Example

The diagram below shows three straight lines intersecting at a point.



Stuck on something?
Ask questions and get help with exactly what you're revising.
Got it

Vertically opposite angles between two intersecting lines are equal

$$x = 25$$

Angles that meet on a straight line add up to 180°

$$x + y + 98 = 180$$
$$25 + y + 98 = 180$$
$$123 + y = 180$$

Solve to find y

$$y = 180 - 123$$
$$y = 57$$

$$x = 25 , y = 57$$
