Congruence

What is congruence?

- Two shapes are **congruent** if they are **identical** in **shape** and **size**
  - One may be a **reflection**, **rotation**, or **translation** of the other
- If one shape is an **enlargement** of the other, then they are **not identical in size** and so are **not** congruent
  - If all the angles are the same, then the shapes are **similar**

How do we prove that two shapes are congruent?

- To show that two shapes are **congruent** you need to show that they are both the **same shape** and the **same size**
  - If a shape has been reflected, rotated or translated, then its image is **congruent** to it
- Show that **corresponding sides** are the **same length**
- Show that **corresponding angles** are the **same size**
- You do **not** need to show that they are facing in the **same direction**

Examiner Tips and Tricks

Tracing paper can help in the exam if you are unsure whether two shapes are congruent:

- Trace over one shape and then see if it fits **exactly** on top of the other
- Only do this if the image is drawn **to scale**
