Basic vectors

What is a vector?

- Vectors represent a movement of a certain **magnitude** (size) in a given **direction**
- You should have already come across **vectors** when translating functions of graphs
- They appear in many contexts of maths including **mechanics** for modelling forces
- Vectors can be represented in different ways such as a **column vector** or as an **i and j unit vector**

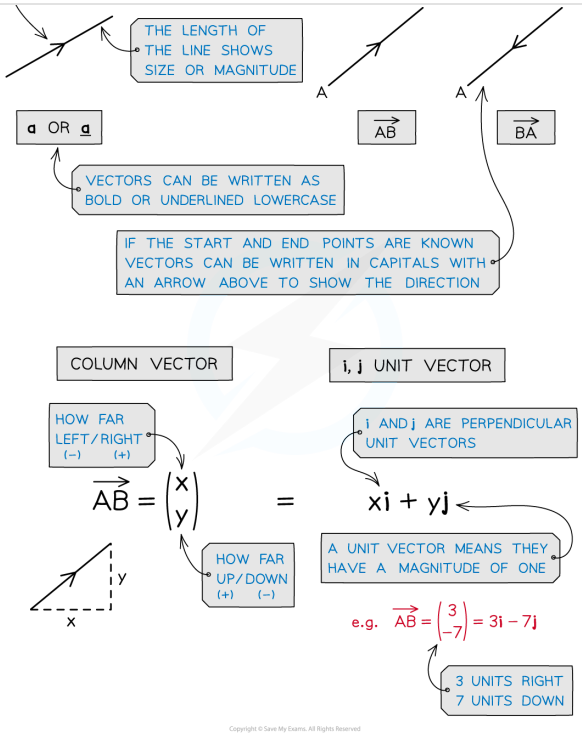
Got it

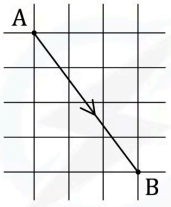


Examiner Tips and Tricks

- Think of vectors like a journey from one place to another.
- Diagrams can help, if there isn't one, draw one.
- In your exam you can't write in **bold** so should <u>underline</u> your vector notation.

Worked Example

a) From the diagram below, write the column vector for $\overrightarrow{AB}$.



b) Write the column vector $\begin{pmatrix} -2 \\ 5 \end{pmatrix}$ using the unit vectors **i** and **j**.
